ABOUT US

Icel began its journey in the electric cable industry in the 1950s as a private enterprise, evolving into a **cooperative** in **1978** through a dynamic 'workers buyout'.

Today we are a modern and structured company positioned among the leaders in the electric cable sector in Italy and Europe.

Our main facility in Lugo (RA) along with our plants in Zingonia (BG) and depots in Salerno and Bari, covers over **190.000 m²** and employs **300 people**, generating a **turnover of €350 million**.

In **2018** we expanded our business by acquiring **Alfa Trafili** in Alfianello (BS), a leading producer of copper wire rod and processor of copper and aluminium. With two plants covering **36.000 m²**, Alfa Trafili contributes **€155 million** to our annual turnover.

Icel continuously optimizes its processes to ensure high-quality products and services. Research and development of innovative technologies drive the company's growth, enabling it to meet clients' needs and efficiently address product, machinery and process challenges.

Since **2020** following our transformation into a **Benefit Corporation**, we have strengthened our commitment to social and environmental responsibility, operating consciously, sustainably and transparently with respect for people, communities and the environment.

In 2021 we founded **NRG Cables**, a company specializing in the customized electrical cables.

In Icel we pursue constant innovation within a corporate philosophy that values our associates' work and integrates safety, quality, and environmental protection into all processes.

ICEL: Cables connecting the world
Copper, Quality and Safety serving
People and the Environment

MISSION

Icel produces cutting-edge cables for energy and connectivity, essential for vital infrastructures such as hospitals, schools, and houses.

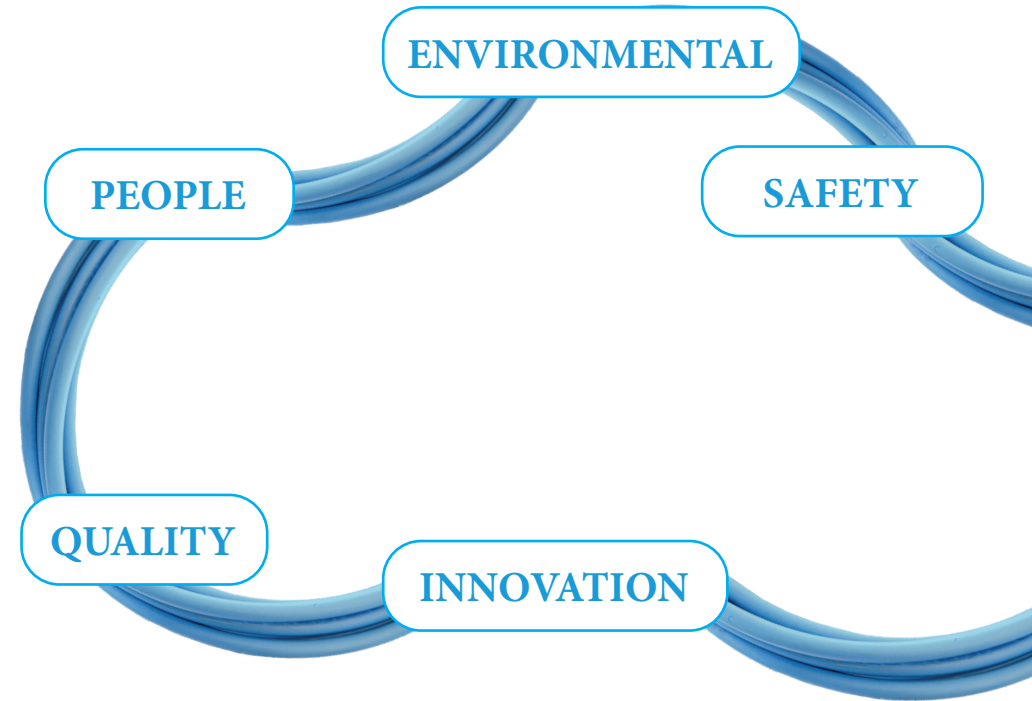

Certified by qualified laboratories in Italy and Europe, we are committed to quality and safety.

Our mission focuses on excellent products, high-level customer service, and valuing our people by providing the best working conditions and maximizing their potential.

VISION

Our vision at Icel is to become the benchmark in the cable and conductor market, with a determined focus on the renewable energy and sustainable mobility sectors.

Icel's goal is to be a cooperative organization recognized for its ethical standards and steadfast commitment to gender equality, fostering a workplace that equitably values the diversity of talents.
