I NOSTRI MARCHI

Cavi unipolari senza guaina, con conduttori flessibili isolati in PVC, non propaganti l'incendio e a ridotta emissione di alogeni, realizzati con tecnica di colorazione superficiale, ideali per installazioni fisse.

Single-core cables without sheath, with flexible conductors PVC insulated, flame retardant and with reduced halogen emission, manufactured using skin colouring technique, suitable for fixed installations.

Cavi LSØH (Low Smoke Zero Halogen) atossici, isolati in G16, G17, EI5 o TI7, non propaganti l'incendio e/o la fiamma, progettati per soddisfare i requisiti di reazione al fuoco del Regolamento CPR.

LSØH (Low Smoke Zero Halogen) non-toxic cables, insulated in G16, G17, EI5 or TI7 compounds, flame retardant and/or flame propagation resistant, designed to meet CPR fire reaction requirements.

Cavi non propaganti l'incendio, a ridotta emissione di alogeni e con basso contenuto di acido cloridrico nei fumi sviluppati in caso di combustione.

Flame retardant cables with reduced halogen emission and low hydrochloric acid content in the fumes released in case of fire.

Cavi resistenti al fuoco, LSØH (Low Smoke Zero Halogen), privi di alogeni e senza piombo, Ecogamma.

Fire-resistant LSØH (Low Smoke Zero Halogen) cables, halogen-free and lead-free (Ecogamma).

Cavi isolati in gomma etilenpropilena ad alto modulo (G16), con guaina in PVC qualità R16 antiabrasiva, per installazioni fisse, progettati per soddisfare i requisiti di reazione al fuoco del Regolamento CPR.

Cables insulated in high modulus ethylene-propylene rubber (G16), with abrasion-resistant R16 quality PVC sheath, suitable for fixed installations, designed to meet CPR fire reaction requirements.

Cavi in poliuretano progettati per sistemi di ricarica in corrente alternata di veicoli elettrici, ideali per uso domestico e pubblico.

Polyurethane cables designed for AC charging systems of electric vehicles, suitable for both domestic and public use.

Cavi elettrici isolati in PVC per collegamenti super flessibili.

PVC insulated cables for super-flexible installations.

Cavi per applicazioni in impianti fotovoltaici, progettati per garantire elevata resistenza agli agenti atmosferici, ai raggi UV e a condizioni ambientali gravose.

Cables for photovoltaic applications, designed to ensure high resistance to weathering, UV radiation and harsh environmental conditions.

Cavi unipolari flessibili per energia, isolati in PVC, senza guaina, per applicazioni generali.

Flexible single-core power cables, PVC insulated, unsheathed, for general-purpose applications.

Cavi in gomma LSØH atossici, ideali per ambienti secchi, umidi o bagnati anche in immersione permanente fino a 500 m, utilizzabili in installazioni esterne, con esposizione ad agenti atmosferici e raggi UV.

Non-toxic LSØH rubber cables, suitable for dry, damp or wet environments, also for permanent immersion up to 500 m, suitable for outdoor installations with exposure to weathering and UV radiation.

Cavi elettrici flessibili, isolati e con guaina in PVC resistente all'olio, ideali per applicazioni in ambienti industriali e domestici.

Flexible electrical cables, PVC insulated and sheathed, oil-resistant, suitable for both industrial and domestic applications.
